LOADING CENTER

Loading and centering the log is the key to the Ultimate Scragg Mill. Fast, exact center increases yield and speeds production. Positive loading is fast and easy with the Ultimate centering system.

SAWYER'S CONTROL STATION

Command Post Control of All Functions
Cant support roller assures cants remain square, end to end.

- Maximum log size: 16" dia. x 10'
- Maximum cant size: 12 x 12
- Minimum cant size: 4 x 4

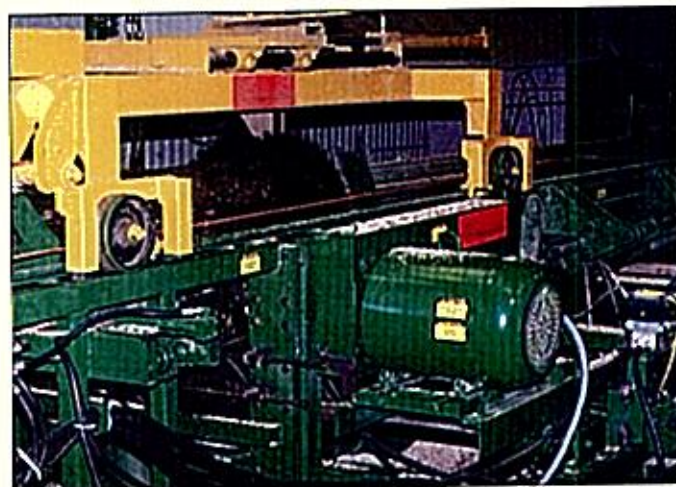

In addition to these size cants, it's possible to take 1" or 2" boards from both sides or either side.

CANT-LOG ROTATION USED TOGETHER WITH THE Ultimate CENTER

Exact 90° rotation results in square cants and lumber—log after log, day after day. End dogging unit provides positive clamping and holding of logs. The end dogger/rotator also aids in positioning logs.

PLENTY OF POWER

- 75 H.P. standard motor drives
- 2-15/16 arbors with 8" collars give the heft required for real production. Companion units for real production for the Ultimate Scragg are the infeed deck with the stop and charge log loader and the material conveyors and cant/board transfer chains.
